6th Milan Breast Cancer Conference

Innovation in Care and Research

CHAIR
U. VERONESI
A. GOLDBIRSCH

JUNE 16-18
2004

Dear Colleague,

It is a pleasure for us to welcome you to the 6th Milan Breast Cancer Conference a conference focused on innovations in patient care, treatment strategies and disease prevention. The conference is structured to facilitate discussions between the faculty and audience to promote better understanding of the issues. The sixth assembly of this conference will again provide a friendly, stimulating environment for the presentation of new developments and provocative discussions of the future for breast cancer research.

This year's conference will again provide the opportunity to listen to experts present the most up-to-date information in a variety of fields. Breast cancer detection and staging are constantly evolving as the technologies improve. Breast cancer surgery is continuously being refined based on the principle of maximum respect for a woman's body image and well being. Surgery has been integrated with intra operative radiation therapy to obtain the best local disease control and also to minimize the side effects of effective treatment. Presentations will also discuss the recent advances in specific sentinel node biopsy assessments. Patient's preferences are an essential component of treatment decision-making, leading to improved quality of life and patient satisfaction. The tailoring of systemic treatments for individual patients can utilize information such as response to preoperative treatments or the impact of sequential endocrine therapies in the adjuvant setting. The conference will also focus on the disease process; defining standards for the pathological definition of disease spread; exploring the challenge of integrating genetics and molecular pathology into therapeutic strategies; and developing new drugs that target specific molecular mechanisms. Researchers and clinicians in Milan have made important contributions in several areas, such as new surgical approaches, improved radiation treatments, and advances in medical therapies. The intellectual expertise, practical skills and strong commitment to enhance knowledge in the field of breast cancer in Milan leads to its natural choice as a venue for the conference.

Welcome! We hope you have an enjoyable and inspiring conference.

Umberto Veronesi and Aron Goldhirsch
